

Buka, Murat, Carlos, Benjamin (Group 5)

### Sprint 2 Deliverables Notes:

Project URL Link: <http://css1.seattleu.edu/~mozcubukcu/Group/index.html>

- a) For our second sprint, our team took on posting and completing task cards in our team's area on zoom, and had meetings to help figure out specific architectural details on designing our website, like what features and categories/sections should the front page consist of, where can we put a review section for devices?, etc. We split up the workload, so that each member more or less has one page to fully write up and develop themselves, then in our next sprint, we plan to review each one and the site as a whole and decide on what functionality we can trim or add to improve it. Our site has the main functionality of an e-commerce website. We have a home page, a contact/reviews section, and a category page of phones which we can add more electronics to and scale over time if we have the resources for it, and CSS and JS external files, to make changes universal and easy to implement.
- b) As a team, we have completed around 15-20 cards throughout the quarter. Some are smaller caliber tasks, like ICE website reviews, playing with the task system, etc., while others are larger, like designing the interface for the home page, and creating the GitHub repository. Buka has done around 4-5 cards, while Carlos and Benjamin have done around 4-5 cards, and so has Murat. The team's work has been equal so far, as to collaborating.
- c) GitHub Commits Number: At the due date of Sprint 2, we have around 27 commits to the GitHub repository. Most of which are from Benjamin, Buka, and Murat. Some were small changes, to try and figure out and learn how to do commits and pushes to the repos correctly, while others were larger changes, like updating a whole page, etc.
